

Session 3

UI From Back to Front(end)

Session 3 - UI From Back to Front(end)

Agenda

Gain visibility into historic and ideal processes for taking features from the customer's want/need lists through front end ideations, design, integration and implementation.

Session Delivery - Kevin

Session Audience - DS + MLOps team

Outcome

- Grasp basics of UI thinking and endpoint use and integration.
- Gain feedback for what's worked and what could be better.
- Discuss best practices for when/where UI can be considered and explored.
- Rally around ideal processes to smoothly integrate backend features with front end display and interaction.

UI and UX, Kevsplained

- UI = User Interface
- UX = User Experience
- We're all UX'ers
- Kevin's the only UI'er... for now!
- Design systems can make anyone a UI'er

Look Out! Front End Code!

```
let api_path = process.env.REACT_APP_API_HOST + '/stream'
const payload = {
  user_input: queryInput.trim(),
  metadata: {
    collection: queryCollection,
    topics_filter: queryTopic,
    session_id: sessionId,
    user_id: userId,
    user_groups: userGroups
  }
}

const response = await fetch(api_path, {
  method: 'POST',
  headers: {
    'Content-Type': 'application/json',
    'Authorization': 'Bearer ' + accessToken
  },
  body: JSON.stringify( payload ),
})

const reader = response.body.getReader()
const decoder = new TextDecoder('utf-8')
```

Pitfalls...

- Environment variables where?
- Segment data for clean use without parsing
- Cache data/queries where possible (save tokens, save the world)
- Clean/clear HTTP response codes, errors

...to Perfection!

- Loop Kevin in early in feature planning
- Design (see? you're a designer!) the endpoint
 - Route → GET or POST → Payload → Responses
- Setup and relay any env, docker vars
- Kevin setup front end, troubleshoot

Questions? Ideas?

- What's worked? What hasn't?
- Hit me up now or anytime
- Thanks!
